Temporal
state machine
each gate emits (r_i, c_i): a tier on $\mathcal{R}$ and a confidence
ACWCM: adaptive confidence-weighted conservative merging
Phase 1
any $r_i = R1$
return R1
Phase 2
$r_{\min}$ = most cautious r_i
MIN selection
Phase 3
confident consensus
relax by at most 1 tier
Outputs
final tier $\hat{r}$ · counterfactual safety certificate · audit trail
